

BEST DAILY USE PRACTICES

identiMetrics™

Cheat Sheet

identiMetrics™ is a more accurate replacement for a barcode scanner, pin pad or swipe card reader.

Here's how it works: The enrollment process combines the students' biometric data with the students' ID number. We send ID numbers to a host application that takes those ID numbers and pulls up an account.

GET READY TO USE THE SYSTEM:

- **Host Applications:**

The host application is the software that our system sends an ID number. When you are scanning make sure that the host application is open and ready to receive from us.

- **identiMetrics:**

When you are using our system, make sure that the identiMetrics Scan Manager™ is open and reads: "Place Finger Lightly."

- **Other Applications**

Make sure that other unnecessary programs are closed. Other programs and web pages may cause the host application and identiMetrics to run more slowly than it should.

DAILY USE PRACTICES:

For students:

- Place fingers flat and lightly.
- Keep fingers toward the middle and top of the scanner.
- Use a little water to create contrast if having trouble scanning.

For people scanning students:

- Keep an eye on the scanner box for visual guidance.
- Listen to the scanner sounds for guidance.
- Place fingers for really young students.
- Keep the scanner clean with an alcohol based cleaner.
- Change sounds periodically.
- Practice scanning younger students.
